

Elevate Dental Agency – Sustainability Policy

Purpose

Elevate Dental Agency is committed to reducing its environmental impact and promoting sustainable practices across all areas of operation. As an agency that involves regular staff travel to dental practices, we recognize the importance of minimizing travel-related emissions and optimizing efficiency in our service delivery.

Policy Statement

We strive to keep mileage as low as possible by planning appointments based on geographical proximity and grouping visits to nearby practices. This approach not only reduces fuel consumption but also enhances the overall efficiency of our operations. Our staff are encouraged to consider environmentally friendly travel options where practical, including public transportation, cycling, carpooling, or the use of low-emission vehicles.

Where in-person visits are not essential, we actively promote the use of virtual communication tools such as video conferencing and digital collaboration platforms. By offering remote support and training wherever feasible, we are able to further reduce the need for travel without compromising service quality.

To ensure we are making consistent progress, we regularly monitor and record travel mileage. This data is reviewed periodically to assess our performance and identify new opportunities to improve. Our aim is to establish a long-term culture of sustainability, and as such, all team members are encouraged to engage with and contribute to our environmental goals. We provide guidance and regular updates on best practices in sustainable travel and support continuous learning around environmental responsibility.

This policy will be reviewed annually and updated as needed to reflect advances in sustainable practices, changes in regulations, and the evolving needs of our clients and team. Elevate Dental Agency is committed to leading by example in the dental support sector through responsible and forward-thinking environmental stewardship.
